FORMAL DEDICATION OF UNION

On October 30, 1958, The Guy S. Millberry Union was formally dedicated at a banquet. Dr. John B. deC. M. Saunders, Provost, Medical Center Campus headed the program, followed by the Reverend Lawrence K. Whitfield, Pastor, Temple Methodist Church, who gave the invocation. Dr. Saunders, toastmaster, introduced the following special guests: Mr. Donald McLaughlin, Chairman, Board of Regents; Miss Marcia Rehfsuss, President, Associated Students; Mayor George Christopher; President Clark Kerr.

President-Emeritus Robert Gordon Sproul dedicated the building with Dr. George Steninger, Chairman of the Board of Governors responding. The California Glee Club, under the direction of Robert Paul Commanday, did a musical selection, followed by an address by Mr. Frederick Stecker, Director of University Relations, Ohio State University. The Reverend Whitfield gave the Dedicatory Prayer and Dr. R. Gordon Agnew, Director, Medical Center Chorus presented "Hail to California" to end the program.

FOR YOUR GOOD HEALTH Medical Center Student Health Service

The status of your health can be a significant factor during your professional training, experiences and accomplishments. Though good health does not necessarily assure your getting the most out of your professional curricula, poor health is a serious handicap to a fruitful and effective professional career.

Both you and the University are making large investments of time, effort and money in your professional training, and it is just good sense and sound business for both to protect mutually these investments through the prevention of acute and chronic physical and emotional illnesses whenever possible. When the prevention of illness is not completely effective, the next logical step is to utilize the quickest, most effective treatment.

The Student Health Service at the Medical Center has been given the responsibility by the University of maintaining your physical and emotional welfare. Every means of prevention and protection against developing acute or chronic illnesses is instituted, and when illnesses do occur prompt treatment is initiated. However, the effectiveness of the Student Health Service is completely dependent upon you. Prompt reporting upon the first indication of anything amiss as well as reporting promptly for the routine preventive measures will assure an effective program for both you and the University.

The facilities of the Student Health Service are available to all regularly registered students at the Medical Center. Dispensary hours are from 9:00 a.m. to 5:00 p.m. on week days and from 9:00

a.m. to 12:00 Noon on Saturdays. During all other times, including holidays, you may report to Moffitt Hospital Emergency Room. You are urged to report to the Student Health Dispensary during the regular hours rather than to wait until Midnight or later and have to report to the Emergency Room where you may have to wait for some time before a physician is available. The physicians at the Dispensary are there for you only, while those on call at Emergency may have many other patients to see.

Services Available

Outpatient Care: The physicians at the Student Health Service Dispensary have a regular schedule of hours. It will be to your advantage to return to the same doctor on each visit so that your treatment will have continuity and a personal doctor-patient relationship will be established.

In addition to the general medical consultants and psychiatrists at the Dispensary, consultations, examinations and treatment by medical specialty and surgical consultants are available upon referral by a Student Health Service physician. Referrals to any of the Outpatient specialty clinics must likewise be made only with the approval of a Student Health Service physician.

(Cont. on Page 3)

Heart Men Meet

The new Cardiovascular Research Institute of the University of California Medical Center sponsored its first scientific meeting Thurs. afternoon, Oct. 23. Guests included physicians and scientists attending the annual meeting of the American Heart Association, which began Friday in San Francisco.

Dr. James Watt, director of the National Heart Institute, United States Public Health Service, introduced the session. Three major scientific papers were presented:

1. One of England's most distinguished physicians, Sir George W. Pickering, Regius professor of medicine at Oxford University, reported on "Population Studies in Human Disease."

2. Dr. I. Lyon Chaikoff, U.C. professor of physiology, presented "Some Thoughts on Cholesterol Metabolism and Arteriosclerosis," a central problem in current research on heart disease. Dr. Chaikoff is widely known for studies of human metabolic processes and was a pioneer in use of radioisotopes in biological research.

3. Dr. Julius H. Comroe, Jr., director of the Cardiovascular Research Institute, spoke on "Contributions of Pulmonary Physiology to Clinical Cardiology." Dr. Comroe is a leading investigator of lung function and its relationship to circulatory disease.

Following the program, the visiting scientists toured the Institute's laboratories and research facilities on the 13th floor of the Herbert C. Moffitt Hospital. The floor contains 22 laboratories and an eight-bed clinical research area for many-phased investigations of the functions and dis-

(Cont. on Page 3)

CARDIOVASCULAR RESEARCH INSTITUTE DEDICATED HERE

CENTER DEDICATED

The new Cardiovascular Research Institute of the University of California Medical Center was dedicated in ceremonies Thursday afternoon, Oct. 30. Earl Warren, Chief Justice of the United States, was principal speaker.

The Institute occupies the 13th floor of the Herbert C. Moffitt Hospital. Its quarters, built at a cost of about \$1,000,000 and occupied during the past several months, constitute the West's newest and most complete center for research on human circulation and its diseases. The Institute is staffed by members of 13 School of Medicine departments and by more than 20 research fellows and trainees.

U.C. President Clark Kerr introduced Chief Justice Warren at the ceremonies. Richard J. Stull, the University's vice president for medical and health sciences, presided, and Dr. J. B. deC. M. Saunders, dean of the School of Medicine and provost of the San Francisco campus, described the history and development of the Institute. Dr. Julius H. Comroe Jr., director of the Institute and professor of physiology, spoke on "Goals of the Institute."

The Institute has been described by Dean Saunders as offering "an opportunity for expression of teamwork in a greatly broadened program of investigation."

Its 17,500 square feet of floor space contains 22 individual laboratories equipped for studying the cardiovascular system and related organs (especially the lungs and kidneys) at all levels—in man, animals, tissues, and cells. There are also an eight-bed clinical research area with its

own metabolic diet kitchen, and several laboratories that each will serve the needs of a variety of research projects.

These multiple-project facilities include two rooms for specialized radiologic studies including cardiac catheterization and x-ray contrast studies of the heart and blood vessels; well-equipped laboratories for radioisotope studies; facilities for high-speed centrifugation of body fluids; and cold rooms for biochemical studies at controlled low temperatures.

Studies now in progress illustrate the broad range of current cardiovascular research. Among problems being investigated by the Institute staff are these:

The effects of emotions on numerous physiological functions including blood pressure, heart rate and skin temperature; transport of substances across cell membranes in general and across the placenta and the "blood-brain barrier" in particular; mechanisms of fat transport and metabolism; the pathology of pulmonary emphysema, a lung disease characterized by severe breathlessness and often associated with heart disease; blood circulation in the brain; nervous pathways regulating circulation and

respiration; heart function after cardiac arrest and open heart surgery.

The Institute's research program is accompanied by a variety of contributions to medical education. Each senior staff

member is also on the School of Medicine in the country.

Research fellows and trainees—23 of them this year—work on Institute projects under the direction of senior investigators. They are encouraged to accept

Newly-developed body plethysmograph permits rapid measurement of blood flow through the lungs, gas volume in lungs, and resistance to air movement, with minimum discomfort to patient. Dr. John Bettinger, San Francisco Heart Assn. Senior Research Fellow (center), is supervising test run here.

Medicine faculty and takes part in teaching medical and graduate students. And one of the Institute's major activities is its program for pre- and post-doctoral research fellows and trainees, among the most extensive of its

teaching assignments in the basic medical sciences. Special courses are provided for them in mathematics, statistics, physics and physical chemistry.

When the Legislature authorized construction of the Herbert C. Moffitt Hospital, funds were

included for the shell of an additional floor to house the Institute. This appropriation bill was signed by then Governor and now Chief Justice Warren. Following completion of the hospital in 1954, the Legislature appropriated \$460,000 to fill the shell of the 13th floor, and an additional construction grant of \$230,000 was provided later by the U.S. Public Health Service. Numerous additional grants have been received for special equipment.

Construction began last year, shortly before the appointment of Dr. Comroe as director. The internationally-known scientist and medical educator had previously been chairman of the department of pharmacology and physiology at the University of Pennsylvania Graduate School of Medicine.

Dr. Comroe's own research activities center on pulmonary physiology and the relationships between lung and heart function.

The 2 p.m. dedication was preceded at noon by another observance of special significance to faculty and alumni of the School of Medicine. It celebrated the hanging of a portrait of Dr. William J. Kerr, professor of medicine, emeritus in the Institute corridor. Dr. Kerr, as chairman of the Department of Medicine, originally suggested before World War II that a Cardiovascular Research Institute be established at the Medical Center. The informal ceremony will be attended by Dr. and Mrs. Kerr, their daughter and son-in-law, Dr. and Mrs. Edwin F. Alston, and by several of the Kerrs' longtime friends and associates.

EDITORIAL

"THE FUTURE"

Financial security at last—For the present year, at least, Synapse will have no trouble paying its bills. At the last meeting of the Board of Governors it was voted to finance Synapse for at least this year. It is good to know that the need for a newspaper at the Medical Center has finally been recognized.

It is our responsibility to justify this expenditure by producing a worthwhile publication. This is a task which cannot be performed by just a few. This is an activity by the students and for the students. Student help is still needed. May I urge you once again to come in and devote a small part of your time to the publication of Synapse.

You may have noticed that the last issue was a week late and contained numerous errors. This was unavoidable. Due to the illness of some members of the staff, and no help from other sources, the entire load fell on two people. This, coupled with the late submission of copy threw us behind schedule resulting in a week's delay in publication. Hereafter we shall publish the date of the next deadline in each paper, and copy must be submitted by that day. On occasion copy has been submitted concerning events which would have already happened by the date of publication, and these have not been included in that issue. If an event is to be publicized, it should be done so in advance, not at the last possible minute. We have been disappointed in the past that big events have missed being publicized in the Synapse due to a failure to submit copy at all, or copy being submitted concerning an event prior to the publication date. May we impress upon you the importance of meeting these deadlines, and of keeping in mind that the paper will not be published until **one week later**.

I would now, once again, make this plea to **EVERYONE** at the Medical Center. This is your newspaper. Support it and it will grow and serve you well. Neglect it and it will wither and die.

THE UNITED CRUSADE:

Your 'One Big Give' for 1958

The campus drive for the 1958 United Crusade is your annual opportunity to help support the work of some 250 Bay Area welfare and service agencies. A few points to remember:

1. The Medical Center has long been outstanding in the high proportion of its staff and employees who give to the United Crusade. Let's keep it up.
2. Success of the Crusade depends on your giving, and giving your fair share. It will be easier for you to give as much as you'd like to if, instead of making one cash donation, you pledge to make several contributions at intervals throughout the year.
3. Your donation through your Medical Center solicitor is the only one you will be asked to make. You won't be asked to give again at home, even if you live in another county.
4. That pledge card isn't doing anyone any good while it sits on your desk. Fill it out and get it in!

NOON CONCERTS

The Noon Concert of October 28 was an excellent program of vocal duets by Louise Carpenter and Dorothy Rowland. Mildred Strand accompanied them on the piano. These artists are pupils of Mrs. Mary Groom Jones, who is on the music faculty of the University of California in Berkeley.

Today's concert will be held in the Music Room of the Millberry Union for the first time. It is hoped that it may prove better than Room B of the Old Medical School building where the concerts are currently being held. The program will consist of selections by Bach, Imbrie, and Bee-

thoven, with Findlay Cockrell as the featured artist on the piano. Mr. Cockrell is winner of the Hertz Memorial Scholarship, and will soon be leaving for New York City to begin his study under this scholarship.

On November 11, the program will be performed by Judy Maas, the soprano who sang at the first Noon Concert program last November. This concert will be given in Classroom B.

The programs are open to all who are interested in attending, and you are invited to bring your lunch and enjoy an hour of music Tuesday afternoon from 12:10 p.m. until 1:00.

Library Paging of House Staff and Clinicians

The pagemaster electronic system has now been installed in the library for the paging of clinicians and house staff who are working with patients and may be expecting emergency calls. The number of instruments is limited and therefore, must be reserved only for emergency calls. The system is one of signals and does not permit the transmission of messages. The doctor must communicate with telepage to receive his message. Best results will be obtained if the doctors will observe the following procedure:

1. Before coming to the library, inform your source of information to communicate with telepage if you are to be called.
2. Register at the information desk in the library for a pocket instrument. If you have not already informed telepage of your whereabouts then do so from the library telephone.
3. When you receive signal, please go to nearest doctor's phone and call telepage. (There is a doctor's phone on each floor of the library.)
4. When you leave, do not forget to return pocket instrument to the information desk of the library and have the charge against your name cancelled.

The system is devised to give the doctor the greatest amount of freedom while in the library and cause the least disturbance to others when he has to be called by avoiding any loud speaking. Cooperation of all concerned in the observance of the recommended procedures will make it most effective.

WANTED: One Gabber

In the last issue of Synapse it was promised that "On The Hill" would be returning in this issue. It seems though, that Jack Hockel and Bob Neumayr are now Seniors, and they have just discovered that being a senior is not as easy as being a junior. In fact, being a senior just doesn't leave much in the way of spare time, period. Since it takes time to get the news, and then to write it up in a column of this type Jack and Bob just don't feel that they can do it. This leaves us with a sad predicament. A good number of comments have been received about "On The Hill," and everyone seems to want it, or a column of that type in the paper. Our problem—who to get to write it. If any ambitious students (from any school) wish to try their hand at column writing, we would appreciate hearing from them, and letting them try their hand.

Election of Freshman Dental School Officers

In the recent election of officers for the Freshman class in the School of Dentistry, Ernie Rossi was elected president. Vice president is Jim McCortney, Secretary is Julie Wong, Treasurer is Herb Schram, and Four year representative is Jim Blake.

Bewitching Hormone

When Odysseus sailed past the Sirens, he plugged the ears of his crew with wax and had himself bound to the mast so that he might enjoy the siren songs, yet remain in safety.

Now the Homeric charmers have been recalled to name a sex hormone just purified by Dr. Leonard Machlis of the department of botany, University of California, Berkeley.

The hormone, from the water mold Allomyces, is produced by female gametes, attracts male matetes, and is called, aptly, slrenin.

Ants and Intellectuals

By YASIN BALBAKY

At a dinner table, after the food, or rather the act of eating had produced its usual sedative effect, a gentleman doctor—a U.C. man—corpulent and smiling, leaned back in his chair and said: "It is only intellectuals like Dean Saunders who defend this silly idea of a well rounded education. In my opinion one doesn't have to know Greek philosophy to be a good doctor, executive, or a physicist. It is so time consuming to get a good education, and what do you get in return?—Nothing. In fact, an executive at times is better off without such an education."

I had been participating in the conversation, but at this point I lapsed into silence. It was the first time in my life that I heard the word "intellectual" used with the intended connotation. "This is how language evolves" I reflected with enchantment, but also with distress.

The speaker, without knowing it, was expressing a most intriguing trend in the thoughts of our times. Of course it is better to have an unsophisticated executive who can sit at his desk every day drawing charts and computing Chi Squares about his employees, buyers, machines, and production. It is good to have such a devoted and efficient man as long as the sole purpose of education becomes clearly identified as that of producing "efficient men" in the production apparatus, and the purpose of life is that of equating happiness with playing a well-delineated role in the service of that mythological entity "The Efficient State."

The speaker prescribed a value judgment of great significance. He said this is what "good life" is, and for that purpose of conducting such a life, let us educate our youth. The "good life" is the efficient life in the collective mechanism.

Following this line of reasoning it seems pertinent to us in this esoteric discussion to compare an intellectual's idea of a good life with that of a non-intellectual whom I would call, from now on for the sake of simplicity an "ant." It is such a small and delightful word well fitting in this efficient world of ours where brevity is priceless. However, I should clarify here, to avoid any misunderstanding, that I am using the word as it is defined in the small dictionary I have as a "suffix denoting a doer" a definition well suited for our discussion because it is as objective and impersonal as I could imagine. Anyway, now we have at hand "Intellectuals" and "Ants" trying to state what a "good life" is.

Some scientifically minded people may demand before hand a clear definition of the words "Intellectual" and "Ants"; to these people I say with my humble intuitive spirit "Let their ideas of life identify them."

Some old friends of mine, the Catholics and their like would budge at this crucial moment and say "but of course everybody knows that a 'good life' is that of glorifying God." Well, being as anthropomorphic in my religious orientation as I am I can't help asserting that this stock of old friends belong to the class of "Intellectuals" because "Intellectuals" are characteristically and notoriously self-centered. If this point is obscure, I apologize for my lack of desire to clarify it—besides apologizing for digressing so often since our main purpose is to approach that mo-

mentous question "What is a good life?"

Of course Freud indicated "work and love" as the staff of healthy life which is, I admit, a cogent statement; but that man was a "character" and truly hard to classify as an "Ant" or an "Intellectual." Thus we will proceed with no more thought of him.

For the "Ants" the key concept is **efficiency**; thus it becomes undesirable to be roundly educated and intellectualistic because an intellectual can hardly stand being a punch-press operator. Now if a "Big Ant" decides that I am to be a satisfied punch press operator, then I would have to oblige him by not contaminating myself with any idle philosophy or art. I would be efficient, work few hours, and make all people work few hours, and spend my leisure in a way consistent with my orderly education like lying on the bench or watching a ball game. Of course, the "Big Ants" can't afford letting me work very few hours because then my leisure may carry me wayward; yet I am efficient and can make many things, thus affecting quite a vicious circle. Driven to this dilemma the "Big Ant" faces the only reasonable alternative of making me a big consumer and a big destroyer of things. The end result of course is that life becomes a nice and orderly progression of moderate work and moderate leisure for everybody, begetting many things which the "Ants" are eager to have to destroy, to fight with, to send to outer space, or even simply to throw in the sea.

For intellectuals on the other hand, this "antly" world is quite unattractive—in fact, it is abominable. For one thing, they like art, philosophy, religion, beauty, and the human self. They are self centered, whimsical, and often quite inefficient and disorganized. One might say to them "Why not be intellectuals and efficient at the same time, then you can use your leisure in whatever way you want." But it is not really so easy to do because they can't compartmentalize their personalities enough to be orderly punch press operators in the daytime and artists at night; not because they are rigid, but because work for them, to be satisfying, has to be self-actualizing and in close proximity to their ego-supporting orientations. Of course, once in a while an intellectual does compartmentalize with questionable consequences; at other times a hard boiled intellectual chooses to become a "Big Ant" when he is cornered—a blasphemy indeed, but nevertheless a phenomenon that has been observed. Thus the cult of intellectualism leans toward the key concepts of individuality, freedom, and beauty, and at its back—inefficiency and pain.

At this moment I feel as though I have my legs in the mud to the knees, so I had better stop leaving my flighty fragments of philosophy to linger in the mind of the thoughtful, and the war between the "Intellectuals" and the "Ants" for a time to come.

(Cont. from Page 1)

All drugs ordered by a Student Health Service physician are furnished to you without charge. Drugs recommended by specialty consultants in other outpatient areas must be approved by a Student Health Service physician.

Hospital Care: The complete facilities of Moffitt Hospital are available when considered necessary by a Student Health Service physician. Recommendation by a medical specialty or surgical consultant for hospitalization must be approved by Student Health Service.

Visiting hours at Moffitt Hospital for students are from 3:00 p.m. to 4:00 p.m. and from 6:00 p.m. to 8:00 p.m. Remember, the purpose of hospitalization is to care for the persons hospitalized and to restore them to health as soon as possible. Frequent and many visitors defeat this purpose.

Dental Service: Dental Services are not furnished by Student Health Service, nor are costs of dental treatment, including X-rays, except for emergency dentistry. However, dental care is provided at very reasonable rates by appointment with the dental externs. Consultations with members of the Staff of the School of Dentistry and facilities of the Dental Outpatient Department are available.

Indonesian Art Exhibit

An exhibit of contemporary and traditional Indonesian art is on display through November 7, at the Guy S. Millberry Union, University of California Medical Center, San Francisco.

The collection contains more than 110 selected art objects, including paintings, wood and bone carvings, silverwork, fabrics and handicrafts. The public is invited without charge.

The Millberry Union is on Parnassus Avenue at Arguello Boulevard, San Francisco. Hours are noon to 8 p.m.

The exhibit is sponsored by the U.C. - University of Indonesian project in medical education and by the Doctors' Wives Association of U.C. Medical Center. The collection was lent through the courtesy of the Ambassador and Consul of Indonesia.

Newman Club

"Can Man Create Life?" is the title of a lecture to be given by Dr. Elmer Gelinis at the Guy S. Millberry Union (Room 22), Wednesday evening, November 15, at 8:00 p.m.

The Newman Club, sponsor of the program extends an invitation to all the students and faculty members of the U.C. Medical Center to be present. In the course of the lecture the comparative positions of Science, Philosophy and Theology as regards the possibility of life coming from non-living things will be discussed. A question period will follow the formal lecture.

Dr. Elmer Gelinis is an associate professor of Philosophy at the San Francisco College for Women and the University of San Francisco. He received his doctorate in Philosophy from the University of Toronto.

The appearance of Dr. Gelinis makes the second lecturer sponsored on Campus this year by the U.C. Medical Center Newman Club. In February the Newman Club sponsored Dr. Mortimer J. Adler. His lecture on "The Questions Science Cannot Answer" attracted a large group of students and faculty members to the Medical Science Building. The Newman Club plans to bring still another outstanding lecturer to the Medical Center Campus next semester.

Heart Men Meet

(Cont. from Page 1)

eases of the circulatory system and related organs.

The Institute's quarters have been occupied during the past several months by a staff that includes faculty members of thirteen Medical Center departments, in addition to some 20 full-time research fellows and trainees.

Dedication ceremonies for the Institute were held Thursday afternoon, Oct. 30. Earl Warren, Chief Justice of the United States, was the principal speaker. Other participants included U.C. President Clark Kerr; Richard J. Stull, the University's Vice President for Medical and Health Sciences; Dr. J. B. deC. M. Saunders, Dean of the School of Medicine and Provost of the San Francisco campus; and Dr. Comroe.

Spotlight on Senior Nurses

Those two Navy Cadet Nurses have promised themselves to careers even more permanent than that found in the Navy . . . on October 2, **June Roundy** announced her engagement to Tom Tozer, who is in the Doctor of Pharmacy Program; on October 15, **Mary Douglass** announced her engagement to Harvey Woody of the U.S.N. In this same vein, **Jeanine Shippey** announced her pinning to Mike Clark, a sophomore dental student. Congratulations to you all. **Dolores Ambrosini** will relinquish the top place on the 3rd year nurses roll, Saturday, October 18, when she and Don Price will be married. Much happiness, Dolores and Dor!

In the news . . . **Dora Harris** is one of a group of eight young Californians selected as California 1959 International Farm Youth Exchange candidates. This program is designed to "help develop international understanding and to work toward world peace" by allowing young people from farms in the United States to live and work on farms in other countries, and for farm youths from other countries to come here for the same purpose. **Harriet Tyson** will be the Sierra Club's candidate for Snow Queen of the Bay Area Ski Clubs; if she wins, Harriet will reign during the Annual Snow Queen Ball, to be held this year at the Mark Hopkins.

Coming events . . . the Senior Fashion is first on the calendar: featuring uniforms and round-the-clock-clothes, November 6; Senior Play is next: rumor has it that this year will be a "gasser" or something like that; dates — November 13-14. The high point of the year for 2nd and 3rd year students alike: The Junior-Senior Banquet to be held in a so far undisclosed locale, the evening of November 25.

Authors Take Heart

"A more unphilosophical amalgam of anatomical details and crude surgery we never met with. (This book) is an example of debased compilation and unscrupulous assumption."

So wrote a hard-hitting reviewer 100 years ago.

The book: "Gray's Anatomy."

Do You Think for Yourself? (SEE WHAT THIS TEST TELLS YOU ABOUT YOURSELF!*)

Would you turn down an unusual opportunity if it would alter a preconceived plan for the future?

YES ☐ NO ☐

Do you instinctively feel a qualm when you walk under a ladder?

YES ☐ NO ☐

Do you feel your education would suffer if books and notes were allowed at examinations?

YES ☐ NO ☐

When introduced to important people, do you act a role which is quite different from the real you?

YES ☐ NO ☐

Do you think that a public official should do what the voters want him to do, even though he personally may feel it is wrong?

YES ☐ NO ☐

If someone wanted to hypnotize you, would you refuse to let him try?

YES ☐ NO ☐

Can you honestly say you enjoy a game or sport as much whether you win or lose?

YES ☐ NO ☐

Would you feel that you should leave a formal affair if you found you were wearing clothes that were different from everybody else's?

YES ☐ NO ☐

Familiar pack or crush-proof box.

Do you let other people tell you what filter cigarette is best for you, rather than making up your own mind?

YES ☐ NO ☐

The fact is, men and women who make up their own minds—who *think for themselves*—usually smoke VICEROY. Their reason? Best in the world. They know only VICEROY has a *thinking man's filter* and a *smoking man's taste*.

*If you have answered "NO!" to six of the above questions—you are a man who thinks for himself!

FROSH., SOPH., SENIOR MEDS.

WIN BASKETBALL OPENERS

By HIRO MIRAHARA

The independent intramural basketball league got under way on Monday night, Oct. 27. All games played that night were practice games with league play to begin on Nov. 3. There are seven teams entered in the independent league. These include: Buildings and Grounds, Freshman Meds., Sophomore Meds., Senior Meds., U.C.H. House Staff, L.D.S., and Faculty. All independent league games will be played on Monday nights.

Opening night play found the Senior Meds. beating the Faculty, 40-32, the Freshman Meds. rolling over the U.C.H. House Staff, 49-24, and the Sophomore Meds. edging L.D.S., 33-32.

The game between the Senior Meds. and the Faculty was close all the way as the Meds. had to fight off a determined crew of Faculty members to get the win. Hank Chinn led Faculty scorers with 12 points, while Bob Alexander, in addition to scoring 10 points, proved to be the clown of the game with his court antics. High point man for the Senior Meds. was Jerry Hays with 14. Bob Albo and Tom Laughlin contributed 10 points each, with 8 of Albo's 10 coming in the second half. Hays' rebounding also was a big factor in the Senior Meds' win.

The Freshman Meds. simply had too much manpower over a game U.C.H. House Staff team. Although Charles Allen of the House Staff led all scorers with 13 points, his team could not get an offense started as the youthful Freshmen Meds. scored mercilessly. Bob Nemechek and Larry Leuman of the Frosh Meds, both got 8 points while Henry Edington was turning in a fine floor game.

The game between the Sophomore Meds. and L.D.S. turned out to be the most exciting game of the night. The score was close all the way and the game could have been won by either team. Duke Lewis and Gordy Helmers led L.D.S. scorers with 8 points each. Both Lewis and Helmers were rebounding ruggedly. Ben Gibbs of the Soph Meds. led all scorers with 11 points. Bob Wells, scoring 8 points, spear-headed the Soph Meds. win with his team leadership and all around hustle.

All intramural basketball games, both in the independent and fraternity leagues, will be played in the Steninger Gym. Everyone is invited to come out to the games and to support the team of his choice. As the teams round into shape, there will be many exciting games played.

The schedule for the independent league games is as follows:

November 3rd	Build/Grounds	VS	Senior Meds.	6:45- 7:45 p.m.
	House Staff	VS	Sophomore Meds.	8:00- 9:00 p.m.
	Faculty	VS	L.D.S.	9:15-10:15 p.m.
November 10th	Bye		Freshmen Meds.	
	Freshmen Meds.	VS	Sophomore Meds.	6:45- 7:45 p.m.
	Build/Grounds	VS	L.D.S.	8:00- 9:00 p.m.

Notes on the Union Sports

And Recreation Program

Volleyball—The deadline for entries into the men, women, and co-recreational volleyball leagues will be Nov. 7. Competition will be from Nov. 11 through Dec. 16.

Distance Swim—The deadline for entries into the distance swim (men and women) will also be Nov. 7, with competition running from Nov. 10 through Dec. 15.

Chess Club—An organizational meeting of the proposed Chess Club will be held on Thursday, Nov. 13, at 7:30 p.m. The meeting room will be announced at a later date. The Chess Club will be sponsored by the Millberry Union Games Committee. Anyone interested may sign up at the Central Desk of the Union.

Swimming Instruction for Men and Women—Sign up deadline for instruction for beginning, intermediate, advanced and life-saving classes will be Nov. 7. Classes start on the second week in November and will follow this schedule:

Beginners (Non-swimmers)
Monday: 5:30 p.m.—7:00 p.m.
Wed.: 5:30 p.m.—7:00 p.m.
Intermediate (Able to swim 40 yards)
Monday: 7:00 p.m.—8:30 p.m.
Wed.: 7:00 p.m.—8:30 p.m.
Advanced (Able to swim 2 laps length of pool)
Monday: 8:30 p.m.—9:30 p.m.

Wed.: 8:30 p.m.—9:30 p.m.
Life Saving
Tuesday: 5:00 p.m.—6:30 p.m.
Thurs.: 5:00 p.m.—6:30 p.m.
Swimming instruction for children is also available. Those interested may sign up with Bud Alexander, Union Recreation Director.

Squash and Badminton—Anyone who is having difficulty in finding partners for either squash or badminton at certain times of the day may leave his name and time available at the Athletic Control Desk so that a schedule may be made.

Big Game Rooters Bus

Tickets are now available at the Central Desk for the Cal-Stanford Big Game Rooters buses.

Two buses have been chartered to take U.C. Medical Center students and faculty to and from the Cal-Stanford Big Game on Saturday, Nov. 22. The buses will leave Millberry Union at 12:30 p.m. and will return immediately after the game. (by 6 p.m.).

The deadline for the sale of tickets will be Saturday, Nov. 15. There is room for 100 passengers on the two buses and tickets will be sold on a first-come-first-serve basis.

PSI OMEGA, ZIPS WIN IN FRAT LEAGUE

The first night of the intramural league for fraternity saw Psi Omega walloping Buildings and Grounds by a score of 55-14, and the Zips beating the Phi Deltas, 50-39. Although these were only practice games, both Psi O and the Zips showed top form in getting their wins.

Behind the 19 point out-burst by Duke Lewis, Psi O had little trouble overcoming an undermanned Buildings and Grounds team. Wadnizak contributed 17 points to the Psi O total while Teddy Abe was turning in an impressive floor game from his guard position. Jay Vierra led Buildings and Grounds scorers with 7 points.

The game scheduled between Kappa Psi and Nu Sigma Nu was won on a forfeit by Kappa Psi as the Nu Sigs were unable to gather up a sufficient number of players. An intra-squad game was played by Kappa Psi and the few members of the Nu Sigma Nu team who did show up.

The Zips, playing like the team to beat in the fraternity league, looked very impressive in their win over the Phi Deltas. The Phi Deltas, starting slowly after a 15-4 deficit in the first quarter, came back to close the gap to 36-33 at the end of the third quarter. But in the fourth quarter, behind the team leadership of Ron Marenda, the Zips took control of the game and won running away. Fred Willson scored 18 points in addition to getting most of the rebounds for the Phi Deltas. "One Arm" Terzian played a hustling game as guard while scoring 6 points. Ron Wall of the Zips was high man of the night with 21 points, while Hap Stallman scored 11 points and Marenda 10.

Wednesday night, Nov. 5, will be the opening night of league play for the fraternity league. There will be two independent teams playing in the fraternity league. They are County Hospital and General Services. Since these are non-fraternity teams, they will be ineligible for the fraternity league championship trophy. Kappa Psi, Phi Delta Chi, Xi Psi Phi, Nu Sigma Nu, and Psi Omega round out the fraternity teams in the league. All fraternity league games will be played on Wednesday nights.

The fraternity league schedule will be as follows:

November 5th	Nu Sigma Nu	VS	Psi Omega	6:45- 7:45 p.m.
	County Hospital	VS	Kappa Psi	8:00- 9:00 p.m.
	Xi Psi Phi	VS	Phi Delta Chi	9:15-10:15 p.m.
November 12th	Bye		General Services	
	General Services	VS	Kappa Psi	6:45- 7:45 p.m.
	Nu Sigma Nu	VS	Phi Delta Chi	8:00- 9:00 p.m.
